

## Connect to Student Desktop Via RDP (Remote Desktop Protocol)

On your OP Machine:

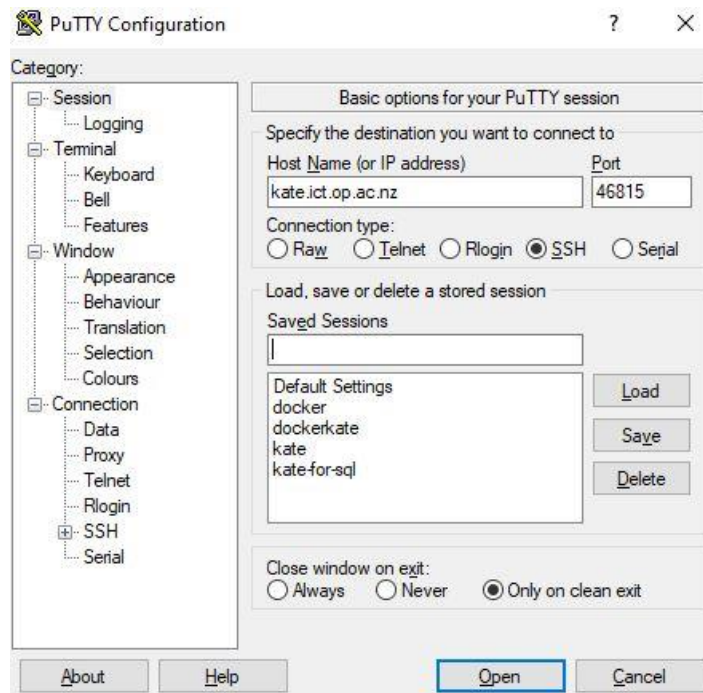

1. Open file explorer & right click "This PC" (formerly "My Computer") and select properties
2. Click Remote settings in the left hand pane
3. Click Allow remote connections to this computer

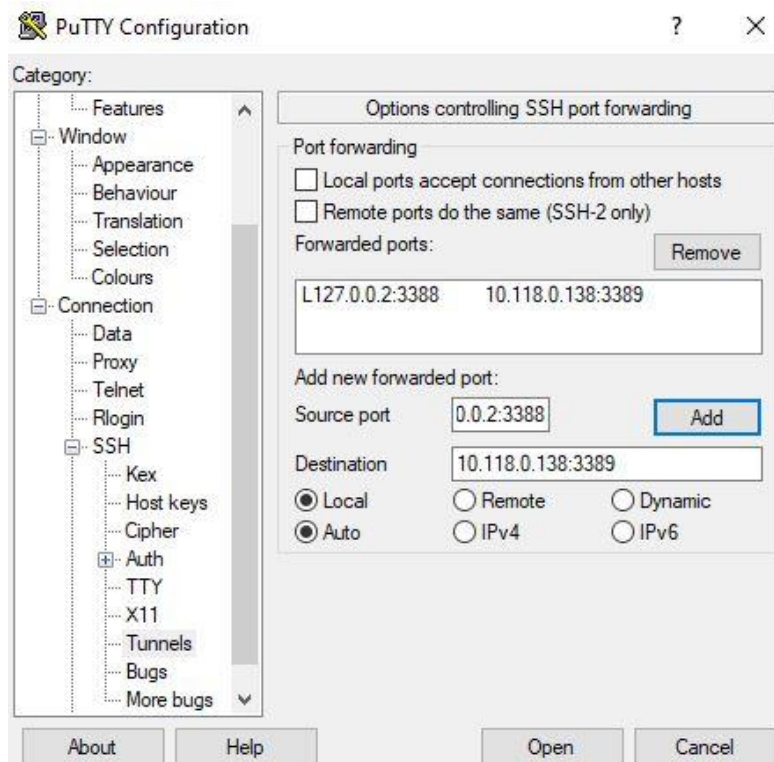

4. Click "Select Users" button. Add your student username if it isn't already there.
5. Apply > Okay
6. Find out your ip address by opening CMD and entering "ipconfig" and note this down.

On your home device

1. Open Putty and enter the following credentials to connect to Kate.  
Hostname: kate.ict.op.ac.nz Port: 46815

2. Don't click open yet! Go to SSH > Tunnels  
Enter 127.0.0.2:3388 as the sourceport and <your ip address>:3389 as the destination.  
Hit Add. Now you can open the session.

3. Log into Kate & leave it running in the background.

4. Search for RDP in the windows task bar and open Remote Desktop Connection. Enter the sourceport 127.0.0.2:3388

5. Click connect and enter your op username and credentials. Your username will match the username in step 4 of the OP machine instructions.

It will be something like op\shinrl1 and your normal password.

\*Success image pending as our PC's are currently unplugged, but I was able to successfully connect from a remote device earlier today\*
